All rights reserved. Publications of the World Health Organization are available on the WHO web site (www.who.int) or can be purchased from WHO Press, World Health Organization, 20 Avenue Appia, 1211 Geneva 27, Switzerland (tel.: +41 22 791 3264; fax: +41 22 791 4857; e-mail: bookorders@who.int).

Requests for permission to reproduce or translate WHO publications – whether for sale or for noncommercial distribution – should be addressed to WHO Press through the WHO web site (http://www.who.int/about/licensing/copyright_form/en/index.html).

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by the World Health Organization in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

All reasonable precautions have been taken by the World Health Organization to verify the information contained in this publication. However, the published material is being distributed without warranty of any kind, either expressed or implied. The responsibility for the interpretation and use of the material lies with the reader. In no event shall the World Health Organization be liable for damages arising from its use.

WHO'S INN PROGRAMME

GENERAL INFORMATION

The World Health Organization (WHO) has a constitutional responsibility to "develop, establish and promote international standards with respect to biological, pharmaceutical and similar products". The International Nonproprietary Names (INN) Programme is a core activity embedded in the normative functions of WHO and has served the global public health and medicines community for over sixty years. The Programme was established to assign nonproprietary names to pharmaceutical substances so that each substance would be recognized by a unique name. Such names are needed for the clear identification, safe prescription and dispensing of medicines, and for communication and exchange of information among health professionals. INNs can be used freely because they are in the public domain. In addition to being a basic component of many WHO medicines activities and programmes, INNs are used in regulatory and administrative processes in many countries. They are also intended for use in pharmacopoeias, labelling, and product information and to provide standardized terminology for the international exchange of scientific information.

INN SELECTION PROCEDURE

Each name proposed for designation as an INN is examined and selected in accordance with a formal procedure. Requests for INNs can be submitted directly to WHO (application forms online at <http://www.who.int/medicines/services/inn/en/>). In some countries where national nomenclature commissions exist, applications may also be made through the national nomenclature authority.

The INN Expert Group, consisting of selected members of the WHO Expert Panel on the International Pharmacopoeia and Pharmaceutical Preparations is officially designated to select nonproprietary names. Based on the information provided, an agreed name is selected and published as a ***proposed*** INN. During a four month period, any person can make comments or lodge a formal objection to the proposed name. If no objection is raised, this agreed name is published as the ***recommended*** INN.

In 1993, the World Health Assembly endorsed resolution WHA46.19 which states that trade marks should not be derived from INNs and INN stems should not be used in trade marks. The Assembly reasoned that such practice could frustrate the rational selection of INNs and ultimately compromise the safety of patients by promoting confusion in drug nomenclature. Above all, INNs are protected for use in the public domain.

CRITERIA FOR SELECTION OF INN

International Nonproprietary Names (INN) should be distinctive in sound and spelling. They should not be inconveniently long and not be liable to confusion with names in common use.

In addition, certain rules have been established in devising INNs to facilitate their use internationally. For example, to make pronunciation possible in various languages, the letters "h" and "K" should be avoided; "e" should be used instead of "ae" and "oe", "i" instead of "y", "t" instead of "th" and "f" instead of "ph".

Information on transliteration of Greek letters in English, French and Spanish is given in Annex 2 and on standardization of the Spanish version of INN in Annex 3.

Further information on the selection procedure and general principles in devising INNs may be found in the "Guidelines on the Use of International Nonproprietary Names (INNs) for Pharmaceutical Substances" (WHO/PHARM S/NOM 1570) available on the INN Programme website at: <http://www.who.int/medicines/services/inn/publication/en/index.html>.

INN STEMS

Stems define the pharmacologically related group to which the INN belongs. Whenever possible, an INN includes the "common stem" expressing the pharmacologically-related group. Names that are likely to convey an anatomical, physiological, pathological or therapeutic suggestion are avoided.

For further details on stems, please refer to "*The use of stems in the selection of International Nonproprietary Names (INN) for pharmaceutical substances*" (WHO/EMP/QSM/2011.3), which can be downloaded from the INN Programme website:
<http://www.who.int/medicines/services/inn/en/>

NAMES FOR RADICALS AND GROUPS

As a general rule, since 1975 INNs are selected for the active moiety of pharmaceutical substances. In the case of INNs of salts and esters it is left to the user to devise their names from the INN in conformity with normal chemical practice. Separate names for salts and esters derived from this procedure are not published. The same approach should be followed in the case of combination products. In all those situations, names are referred to as International Nonproprietary Name Modified INNM.

Some of the radicals and groups involved are, however, of such complexity that, shorter nonproprietary names are selected for these inactive moieties, and published in proposed lists under the title "names for radicals and groups". If a "radical and group name" is used in conjunction with an INN, it is also referred to as an INNM.

In some cases, a name of an INN Radical describes more than one substituent, e.g. (names in Latin) *acefurias*, *aceponas*, *enbutas*, *stinopras*,... Alphabetical list of currently used names for radicals and groups is given in the main part of the document, while the names of elements and chemical groups that were published together with INNs are given in Annex 1.

For further details on the INNM, please refer to the INN Working Document 05.167/3 "*International Nonproprietary Names Modified*" which can be downloaded from the INN Programme website.

INFORMATION ON NAMES USED FOR SPECIFIC GROUPS OF SUBSTANCES

For a few groups of substances containing certain structural features, INNs are selected using particular approaches. Designations used in such INNs are listed in Annex 4. INNs for substances that include a carrier moiety are usually given a two-word name, describing separately the active element and the carrier part. Designations used for toxins (either active or inactivated proteins) are listed in Annex 4.1. Particular designations selected for other types of active moieties and relevant INNs are listed in Annex 4.2. It should be noted that these lists are not comprehensive.

INNs for modified insulins include, as a second word, a qualifier indicating to modifications introduced into the amino acid chain. These insulin qualifiers are listed in Annex 4.3.

INNs for substances that contain as the carrier a polyoxyethylene polymeric chain are given either a prefix *peg-* or a two-word INN, using "*pegol*" as the second word. The list of INNs containing such structures and an explanatory note is given in Annex 5.

Acknowledgements

The INN Secretariat wishes to express its gratitude to Dr R. Boudet-Dalbin, France, to Dr G. Moss, United Kingdom, and to Professor H. Favre, Canada, for their assistance in the preparation of this document. A special thank goes to Mrs E. Cortés, Spain, for review and correction of the Spanish chemical definitions.

Layout of information

INNs: Names for radicals and groups

Comprehensive list

Explanatory Note

Some substances for which a proposed International Nonproprietary Name has been established for the active moiety may be used in the form of salts or esters and their names are devised from the INN in conformity with normal chemical practice. However, in some cases, the radicals or groups involved may be of complex composition and it is then inconvenient to refer to them in systematic chemical nomenclature. Consequently, shorter nonproprietary names for some radicals and groups have been devised or selected, and they are suggested for use with the proposed nonproprietary names.

The following list contains radicals and groups which have been published either in the section "Names for radicals and groups" in lists 1-107 of proposed INN or as part of a two-word INN in lists 1-107 of proposed and 1-68 of recommended INN, respectively. Whenever a name appeared in both lists, reference is made to its publication only in the category "radicals and groups".

Other groups and elements which have been published in two-word INN and which may now be considered as being part of the INNM (modified INN) approach are listed in ANNEX 1 of this document.

In addition, references to British Approved Name (BAN)¹, Japanese Accepted Name (JAN)² and United States Adopted Name (USAN)³ have been included for the radicals, groups and adducts published or accepted for use by these national nomenclature committees.

¹ British Approved Names 2012, Names for ions and Groups, effective date: 1 January 2012

ANNEX 2**Transliteration of Greek letters in English, French and Spanish**

Upper case	Lower case	English	French	Spanish
A	α	alfa (and not alpha)	alfa (and not alpha)	alfa
B	β	beta	bêta	beta
Γ	γ	gamma	gamma	gamma
Δ	δ	delta	delta	delta
Ε	ε	epsilon	epsilon	épsilon
Z*	ζ*	zeta	zêta	dseta
H	η	eta	êta	eta
Θ*	θ*	theta	thêta	zeta
I	ι	iota	iota	iota
K	κ	kappa	kappa	kappa
Λ	λ	lambda	lambda	lambda
M	μ	mu	mu	mi
N	ν	nu	nu	ni
Ξ	ξ	xi	xi	xi
O	ο	omicron	omicron	ómicron
Π	π	pi	pi	pi
P	ρ	rho	rhô	ro
Σ	σ	sigma	sigma	sigma
T	τ	tau	tau	tau
Υ	υ	upsilon	upsilon	ípsilon
Φ	φ	phi	phi	fi
X	χ	chi	khi	ji
Ψ	ψ	psi	psi	psi
Ω	ω	omega	oméga	omega

* Due to possible confusion of the transliteration of these two Greek letters, the future use of the Greek letters ζ and θ is discouraged.

ANNEX 3**Standardization of the Spanish version of INN**

The spelling of the Spanish version of the INN has been standardized in collaboration with a Spanish nomenclature group and the WHO Secretariat (1, 2).

The criteria for standardization may be summarized as follows:

1. keep as close as possible to the present INN (minimum changes)
2. keep "stems" uniform
3. avoid lengthening of words
4. base changes on a combination of:
 - 4.1 acceptance wherever possible of the English and/or French (original) name
 - 4.2 acceptance wherever possible of the existing Spanish name
 - 4.3 consideration of the Spanish phonetics and spelling in special cases.

To be more concise, the Spanish endings similar to the English endings are not shown in this list, even for unusual cases in Spanish (i.e. -cept).

Rules for the Spanish version of the INN***English Spanish***

-ac	-aco	
-ame	-amo	
-an	-án	except: -orfano, -sulfano, -oxano
-ane	-ano	except: insulina defalana/insulina isofana
-ase	-asa	
-ate	-ato	
-barb	-barbo	
benze	bence	
benzi	benci	
chlo	clo	
-el	-el	
-en(e)	-eno	except: -bén, -bufén, -gén (for -gene in English), -rsén (for -rsen in English)
-er	-ero	
-fos or		
-phos	-fos	
-ic	-ico	
-ide	-ida	except: -óxido, -ósido, -glusido, iodide (ioduro), chloride (cloruro), etc.
-il (e) and		
-yl	-ilo	except: -dil, -pril, -guanil, -azenil
-ime	-ima	
-imus	-imús	
-in (e)	-ina	except: -dipino, -nixino, -oxacino, -platino
-it(e)	-ita	except: -arit
-ium	-io	
k-	k-	
-ka-	-ca-	except: -kacina, -kalim, -lukast
-ke-	-que-	except: -kefamide
khe	ke	
-ki-	-qui-	except: leukina, rokitamicina
-kin-	-kin-	in monoclonal antibodies, no change to -k(i)(in)-
-ko-	-co-	

-ku-	-cu-	
-ky-	-qui-	
-ll-	-l-	
-mf-	-mf ¹	except: anfetaminas (derivatives), alcanfor (derivatives), cloranfenicol (derivatives and analogues)
-nb-	-nb ¹	
-np-	-np ¹	
-ol(e)	-ol	
-ome	-omo	except: cef..oma
-on	-on	
-one	-ona	
-ou-	-u-	
-pafant	-pafant	
ph	f	
-prim	-prima	
qua-	qua-	
-qua-	-cua-	
quo-	quo-	
-quo-	-cuo-	
sf-	esf-	
sp-	esp-	
st-	est-	
th	t	
y	i	

¹While *st-* and *sp-* are changed into *est-* and *esp-* respectively, the letter sequences *-mf-*, *-nb-*, and *-np-*, although unusual in Spanish have been retained for the following reasons:
 (a) international linguistic requirements; the established philosophy takes precedence over spelling
 (b) correspondence with the English and French versions; fewer changes to the first Spanish versions (previous cumulative lists).

Last update: August 2012

egaptivon pegol
egaptivon pégal
egaptívón pegol

nonacogum beta pegolum (103)(65)

nonacog beta pegol
nonacog bêta pégal
nonacog beta pegol

enlimomabum pegolum (77)(39)

enlimomab pegol
enlimomab pégal
enlimomab pegol

somatropinum pegolum (103)(65)

somatropin pegol
somatropine pégal
somatropina pegol

Names with -peg- as an infix**cepeginterferonum alfa-2b** (105)(67)

cepeginterferon alfa-2b
cépeginterféron alfa-2b
cepeginterferón alfa-2b

lipegfilgrastimum (107)(68)

lipegfilgrastim
lipegfilgrastim
lipegfilgrastim

empegfilgrastimum (107)

empegfilgrastim
empegfilgrastim
empegfilgrastim

Explanatory note:

INNs for substances which contain, as part of their structure, polyethylene glycol (PEG) polymeric chains are given either a *-peg* prefix, or, in special cases a *-peg* infix. When a two-word construction is used, INNs include *pegol* as the second word. Both approaches are equivalent, the choice in the selection process depending on linguistic considerations. As there is a considerable variation in ways in which the PEG moiety is linked to the other part of the structure, and as there are considerable differences in the average molecular mass of the PEG moiety,

structures of individual substances have not been reproduced in the document, but can be consulted in relevant INN lists which are accessible on-line at

<http://www.who.int/medicines/publications/druginformation/innlists/en/index.html>

Furthermore, it should be noted that INN *macrogol* has been selected for polyethylene glycol as an individual polymeric substance. Each such macrogol name is followed by a number corresponding approximately to the average molecular mass of the product.

WHY INNs?

Since the number of drug substances being registered during the last decades is constantly increasing, there is a strong need to ensure the identification of each pharmaceutical compound by a unique, universally available and accepted name. The existence of an international nomenclature system for pharmaceutical products is crucial for the clear identification, safe prescription and dispensing of medicines to patients, and for communication and exchange of information among health professionals and scientists worldwide.

An **International Nonproprietary Name (INN)** identifies a pharmaceutical substance by a **unique name that is globally recognized and is public property**. A nonproprietary name is also known as a generic name. Generic names are intended to be used in pharmacopoeias, labeling, advertising, drug regulation and scientific literature.
